

BBPOS MAC

1. Copy the file below to the mac directory that you want to install BBPOS
2. Open the terminal and CD into that directory
3. Run the following command: `sudo sh bbpos-install.sh` and follow the prompts
4. Run `bbpos.command` located on the desktop (you can ignore the Unhandled exception. System Exception: Invalid Settings Type)
5. If using a USB device, you will need to obtain the port of the device by running the following command in the terminal: `ls /dev/cu*`
6. Log into the Cardknox Portal and navigate to Payment Engine settings to complete the BBPOS device and port settings.
Type: BBP
EnableDeviceInsertSwipeTap: True
Device Name: ex. Verifone_P400.4
 - a. For **USB Device:**
Device COM Baud: 115200
Device COM Parity: N
Device COM DataBits: 8
Device COM Port: [the above path]
 - b. For **IP Device:**
Device IP Address
Device IP Port
7. Run `bbpos.command` and test a transaction by going to <https://www.cardknox.com/bbpos/request-ajax.htm>
8. To add the application to the startup folder. Open System Preferences and then click on the Users & Groups icon. Once there, find your user account on the left-hand side (although it will always be selected), and then click on the Login Items tab. Add the `bbpos.command` file to have it run automatically on startup.
